Description tag with Braille dots and NFC reader

Dimensions: 100 x 100 mm

5 mm acrylic glass with printed graphics on the back

Embossed Braille dots

Metex silver anodized back

The NFC tag has a built-in chip and antenna, no battery, and lasts for many years.

NFC meets the ISO 14443 standard and is supported by most smartphones.

Place your phone approximately 4 cm within the tag's area, and NFC automatically sends the stored data.

You can save the information in the tag and lock it, or leave it open, but then someone else can enter their own information. Therefore, we recommend locking the entered information.

You can use various NFC apps downloaded from Google Play to enter information.
